

## DxN™

A network service for document translation, routing, and delivery.

The Clearbridge Document Exchange Network (DxN) simplifies the set-up and operation of your EDI and other e-commerce activities. The DxN translates your single native file format to that of any trade partner format and delivers these documents over any type of network connection. With support for EDI, XML, and flat files, the DxN can connect you to trade partners using a variety of file structures and a variety of networks.

### Unload the Burden

**Trade Partner Management** performed by Clearbridge alleviates the headaches associated with initiating and maintaining trade partner relationships.

- Transaction set development
- Network interconnect set-up with trade partner networks
- Translation mapping and testing

**In-Network Translation** eliminates the need to build and maintain translation maps.

- Your business systems need only support a single file input/output format
- Clearbridge takes responsibility for connecting all the moving pieces
- Free technology personnel for other tasks

### To a Reliable and Secure High-Performance Network

**A Single Network** supports all trade partners.

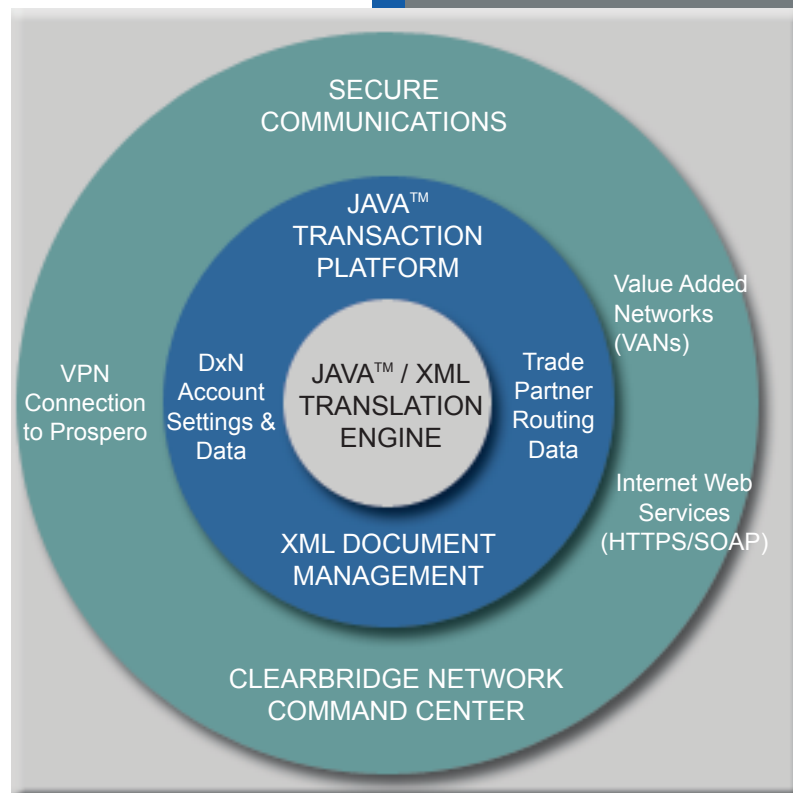

- Interconnects with all major VANs
- Web services (SOAP) interface
- Direct Internet connections (XML servers or EDI)
- Connections to public and private trade exchanges

**Robust Technology** ensures you experience rock-solid performance today and have the right platform for your needs of tomorrow.

- Java™-based transaction management platform and translation engine
- XML-based document structures and translation maps

### AN EASY PATH TO INTEGRATION

- In-Network Translation
- Transaction Status
- EDI, XML, and flat files
- VAN and Internet
